

AIT Laboratories

A HIGHER STANDARD OF SERVICE[®]

AIT Laboratories is a Premier Forensic Toxicology Laboratory Specializing in Compliance Monitoring

AIT Laboratories is the only forensic laboratory that specializes in compliance monitoring testing. With an extensive forensic background, AIT had the ability to capture imperative compliance monitoring toxicology statistics related to our forensic cases in 2008.

The following table shows the type of pain medication found in the total number of positive forensic cases in 2008.

Pain management drug	Number of distinct cases	Percentage of total positive cases (n=7,819)
Opiates	6,204	79.3
Benzodiazepines	1,738	22.2
Methadone	1,635	20.9
Fentanyl	463	5.9

Each pain management specimen is screened, confirmed, and quantified on the same instrumentation used for forensic testing. With our cutting-edge technology, AIT has the lowest cut-off levels in the compliance monitoring testing industry, which allows us to detect the smallest presence of a drug in the specimen. These services help our clients to minimize their risk and improve patient care.
